

WHERE STEAM MEETS
INNOVATION!

Peregrine HD

1800 S

The Falcon ProSolutions Peregrine series steamer is the most technologically advanced steamer available.

The unit is designed from the ground up with your operator and budget in mind. The unit comes with a number of exclusive features that make the Peregrine the most safe and easy to use steamers available today.

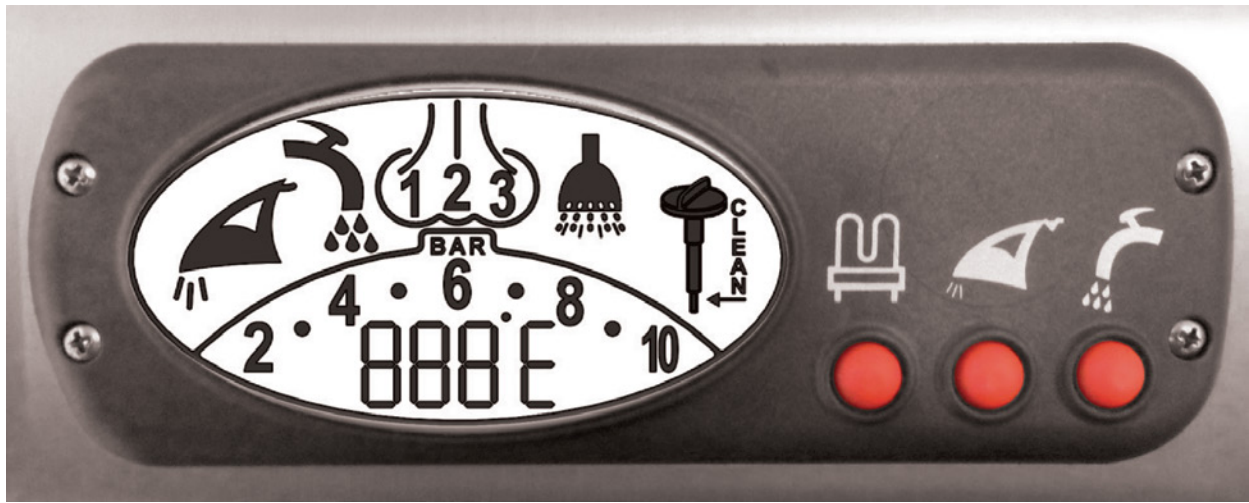

Applications include:

- Education customers
- Contract Cleaners
- Shopping malls and grocery stores
- Shower rooms

THE HEART OF THE SYSTEM

The Peregrine series features **boilers** that are state of the art technology that take steam generators into the main stream of cleaning. The dual coil element maximizes surface area and provides a speedy “heat-up” time. The steam pressure and temperatures remain consistent, even under continuous use. The boiler features our patent pending **INTELLIGENT BOILER TECHNOLOGY** that tells you when it needs descaling. **IBT** allows any operator to perform the descaling maintenance. No seals, gaskets, service parts or tools are required to maintain the Peregrine series machines!

Steam Only Control Panel :

The digital control panel of the Peregrine S and S-HD manages everything for you!

The LCD interface allows you to monitor all functions and communicates when maintenance must be performed:

- Indicators for on and off of all functions; Steam and Chemical dispensing
- Indicator for which of 3 steam levels are being used
- Visible indicator to tell you when maintenance needs to be performed
- Digital readout of both steam temperature and pressure levels
- Visual and audible warning signals alert the operator when you the unit is out of water or chemical

Steam Only Operator Controls

The operator controls on the S and S-HD are simple and intuitive. The operator handle utilizes an on-demand steam button in the grip that has an auto-return-to-off feature. This makes the Peregrine one of the safest and fatigue free steamers to operate. All adjustments for steam flow and the chemical on/off feature is controlled with a simple waterproof switch for each. All adjustments are made from the handle which means you never have to walk back to change a setting!

The Steam only version of the Peregrine (1800S and HD models) are the workhorse of the industry. These units deliver superior levels of Dry Vapor Steam, day in and day out. These powerful steamers with IBT are so efficient they are able to deliver much greater quantities of steam than any competitive unit. How much? Studies show twice as much as the nearest competitor.

The work a steamer provides is delivered through the steam volume it provides over time. Try the Peregrine Series steamer and see what a real steamer can do!
